Hydrants

Reid & Harrison Services hydrants suit the most demanding and diverse farm environments. There are options to suit all types of terrain and effluent pipe, all with galvanised steel construction for a long and trouble-free service life. Our hydrants are designed and manufactured in New Zealand and meet the latest codes of practice for effluent management.

Control Manifolds can be configured with any number of independent outlets, each separately valved to enable full control of distribution.

Z hydrants are also available for connecting your pump to your mainline system.

Free-flow hydrants feature a one-piece bracket for positive leg alignment and have easily configured u-bends and discharge elbows for directing output where it's needed.

Optional non-return valves can be fitted to prevent flow back from elevated mainline sections.

Riser-series hydrants are individually valved to eliminate messy configuration changes. These are particularly suited to farms with large elevation changes.

The discharge elbow can be easily removed and swapped between outlets as needed.
