

Can hose down a yard that holds 450 cows in less than 10 minutes!

Effluent Products Specification RHW_v25

Hydrant Wash Down

The Reid & Harrison Hydrant Wash Down System comprises a high volume pump and a number of fixed outlets. The outlets, used one at a time, can swivel 360 degrees, enabling the operator to wash a large area from each hydrant point. The only requirement is a water storage tank close to the pump.

Features

- The Wash Down System uses volume rather than pressure
- Reduces wash time by up to 90%
- Constructed in stainless steel therefore corrosion will never be an issue again compared to other brands.
- Designed with an industrial swivel that can rotate 360 degrees. The swivel consists of a single row of ball bearings sealed by two O-rings.
- Single or three phase options.
- Uses **NO MORE** water than conventional methods
- Simple to operate

Ideal For

All yards, including multiple slope yards. Steep sloping yards are no longer necessary
